

# MAKE A BUTTERFLY PUDDLER

Help butterflies, especially when it's hot or dry, by making a DIY butterfly puddler for them to rest and drink.

## INSTRUCTIONS:

1. Find and fill a shallow dish or container, even an old plate, with soil or sand. Add a few flat rocks to provide perching spots.
2. Pour enough water in the container to moisten the soil and sprinkle some salt on the surface. Also add overripe fruit like bananas and oranges.
3. Keep the soil moist during the hottest hours of the day, when butterflies are more likely to visit.

## YOU WILL NEED:

- A shallow dish, container or old plate
- a few small flat rocks
- water
- salt
- overripe fruit, like banana or orange

## EXTRA:

keep a note of the butterflies that visit, and find out what species you have in your garden!
